Date of Submission:

LAB 1

```
<!DOCTYPE html>

<html>

  <head>

    <script language="javascript">

      <div>

        function fun3()

          {

            var  uname = document.form.uname.value;

            var password = document.form.password.value;

          }

        </div>

      </script>

    </head>

    <body>

      <div>

        <form name ="form">

          username*: <input type ="text" name = "uname"/><br>

          Password*:<input type="password" name = "password"><br>

          <input type="button" value="login" onClick = "fun3();" >

        </form>

      </div>

      <h1 onclick="fun2();" /> </h1>

    </body>

  </html>
```

OUTPUT

A screenshot of a web browser window. The address bar shows the file path `/C:/Users/User/Desktop/js/div.html` with a close button (X) and a plus sign (+). Below the address bar are navigation icons: back, forward, refresh, and home. To the right of the icons is a document icon and the text `file:///C:/Users/`. Below the browser window, there is a login form with the following elements:

- A label `username*:` followed by a text input field.
- A label `Password*:` followed by a text input field.
- A button labeled `login`.

$user = $_GET['uname'];

$password =md5 ($_GET['password']);

$sql = "insertinto testtable(username,password)

values ('$user' , '$password')";

mysqli_query($conn,$sql);

echo "saved";

?>
```

Output

A screenshot of a web browser window. The address bar shows the file path `file:///C:/xampp/htdocs/myproject/form.php`. The browser has several tabs open, including `/C:/Users/User/Desktop/js/rachita`, `/C:/Users/User/Desktop/js/rachin`, `/C:/Users/User/Desktop/js/index2`, and `/C:/xampp/htdocs/myproject/da`. The main content area displays a login form with two input fields: "Username:" and "password:". A blue "save" button is located to the right of the password field.

    xhttp.send();
}
</script>
</body>
</html>

```

OUTPUT

The XMLHttpRequest Object

Alfreds Futterkiste ▾

CustomerID	WOLZA
CompanyName	Wolski Zajazd
ContactName	Zbyszek Piestrzeniewicz
Address	ul. Filtrowa 68
City	Warszawa
PostalCode	01-012
Country	Poland

LAB 9

//Document object model in JavaScript

```
<script type="text/javascript">

function printvalue(){

var name=document.form1.name.value;

alert("Welcome: "+name);

}

</script>

<form name="form1">

Enter Name:<input type="text" name="name"/>

<input type="button" onclick="printvalue()" value="print name"/>

</form>
```

Output

The screenshot shows a web browser window with a form. The form contains the text "Enter Name:" followed by a text input field. To the right of the input field is a button labeled "print name". Below the form, there is a grey bar with a left-pointing arrow.

Lab 10

```
<script type="text/javascript">

function getcube(){

var number=document.getElementById("number").value;

alert(number*number*number);

}

</script>

<form>

Enter No:<input type="text" id="number" name="number"/><br/>

<input type="button" value="cube" onclick="getcube()"/>

</form>
```

Output

The screenshot shows a web browser window with a light green background. It contains a form with the text "Enter No:" followed by a text input field. Below the input field is a button labeled "cube". At the bottom left of the window, there is a grey bar with a left-pointing arrow icon.

Lab 11

```
<script type="text/javascript">

function countpara(){

var totalpara=document.getElementsByTagName("p");

alert("total p tags are: "+totalpara.length);

}

</script>

<p>This is a pragraph</p>

<p>Here we are going to count total number of paragraphs by getElementByTagName() met
hod.</p>

<p>Let's see the simple example</p>

<button onclick="countpara()">count paragraph</button>
```

Output

This is a pragraph

Here we are going to count total number of paragraphs by getElementByTagName() method.

Let's see the simple example

count paragraph

Lab 12

```
<script type="text/javascript" >

function showcommentform() {

var data="Name:<input type='text' name='name'><br>Comment:<br><textarea rows='5' cols
='80'></textarea>

<br><input type='submit' value='Post Comment'>";

document.getElementById('mylocation').innerHTML=data;

}

</script>

<form name="myForm">

<input type="button" value="comment" onclick="showcommentform()">

<div id="mylocation"></div>

</form>
```

Output

comment

Lab 13

```
<script type="text/javascript" >

function validate() {

var msg;

if(document.myForm.userPass.value.length>5){

msg="good";

}

else{

msg="poor";

}

document.getElementById('mylocation').innerText=msg;

}

</script>

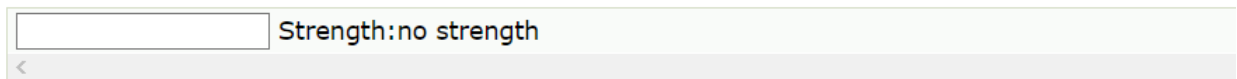

<form name="myForm">

<input type="password" value="" name="userPass" onkeyup="validate()">

Strength:<span id="mylocation">no strength</span>

</form>
```

Output

A screenshot of a web browser window. It shows a single text input field with a light gray border. To the right of the input field, the text "Strength:no strength" is displayed. Below the input field, there is a small, faint left-pointing arrow icon.

Lab 14

Lab 15

JavaScript in OOP

//Class declaration

<!DOCTYPE html>

<html>

<body>

<script>

//Declaring class

class Employee

{

//Initializing an object

constructor(id,name)

{

this.id=id;

this.name=name;

}

//Declaring method

detail()

{

document.writeln(this.id+" "+this.name+"
")

}

}

//passing object to a variable

var e1=new Employee(101,"Martin Roy");

var e2=new Employee(102,"Duke William");

```
e1.detail(); //calling method
```

```
e2.detail();
```

```
</script>
```

```
</body>
```

```
</html>
```

Output

101 Martin Roy

102 Duke William

Lab 16

//Object in javascript

```
<script>

function emp(id,name,salary){

this.id=id;

this.name=name;

this.salary=salary;

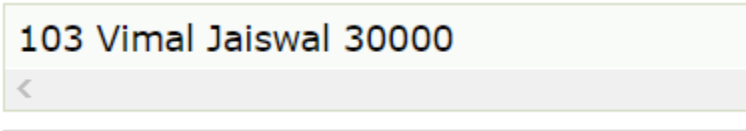

}

e=new emp(103,"Vimal Jaiswal",30000);

document.write(e.id+" "+e.name+" "+e.salary);

</script>
```

Output

A screenshot of a web browser's output area. It shows the text "103 Vimal Jaiswal 30000" in a monospaced font. Below the text is a light gray bar with a left-pointing arrow, indicating that the text can be scrolled horizontally.

Lab 17

//constructor in java script

```
